E.	Application of sacrificial galvanic anode - Before application of sacrificial anode concrete behind bars to be chipped off to insert anode. Tack Weld extra bar to main reinforcement for tying anode. Provide sacrificial galvanic anode at distance of 1000mm c/c by tying the same newly provided reinforcement. Soak the anode in clean water for 20 to 30 minutes for charging the same before placing at proper position.	sqft			
F.	Curing – The curing of levelling fillers and slurries must be especially thorough and long as such as a thin layer especially when exposed to sun and wind can easily dry out burn out. This would greatly reduce the material and strength adhesive tensile strength of filing compound slurry as well as if subsequent surface protective systems.	sqft			
G.	Providing and doing single coat plaster with 1:4 ratio	sqft			
2.	Removing old carpet, cutting, grinding, levelling old tiles surface. Providing and fixing 4/2 tiles with keeping groove of 3mm and filling it with tile grout.	sqft	150.00	400	60,000.00
